

The Software Solution For Hospital Call Lists

April 2010. Person On Call™ Meets the Needs of All Types of Healthcare Facilities.

Person On Call, The Software Solution for Hospital Call Lists, serves hospital facilities from the smallest critical access hospital to the largest multi-hospital health system, and from those needing a system merely for their ER call list to those needing a system to handle dozens of different call lists via a centralized database and access point.

Practice-related call list development and maintenance can be provided to hospital-affiliated practices, all within the same software installation and at no additional cost.

View-only call list capabilities can be provided to any hospital with which you share a patient-transfer or disaster-response related relationship, or with which you share some of the same physician pool for call coverage. These physicians can be provided a secure view into your call schedules, even if they are not licensed for the Person On Call software.

Person On Call greatly improves the production, distribution, and maintenance of your ER call and all hospital call lists. It effectively manages complex call lists, easily handles and instantly distributes unplanned changes, offers simple yet powerful archival and reporting tools, and accommodates ever-increasing regulatory requirements.
